

ABSTRACT OF THE DISCLOSURE

5 A logic operation portion performs an operation on an original sign using personal information obtained by digitizing information associated with a physical feature of an individual for generating an encrypted electronic signature. An electronic signature adding portion adds the electronic signature to an electronic document for distribution. Thus, it becomes difficult to identify an individual and criminal use due to forgery of the electronic signature is prevented. As a result, security of privacy and property of the individual in the market is assured.
